
Decomposition of the catalog bias (138 genes);
vertical distance to the diagonal = loss of
C57BL/6J reads on the FVB/NJ reference
bias = bias_matched
(no C57BL/6J-read loss)
primary catalog only (n = 81)
supported under both definitions (n = 57)
Ndufs5
Rps2
Matched-reference bias: log₂FC(matched)
− log₂FC(naive), mean over tested tissues
Primary bias: log₂FC(FVB ref) − log₂FC(naive),
mean over tested tissues
